Education Department
The Impact of Nursing Students’ Cultural Diversity on the Intention and Attitudes Toward the Use of Information Technology 302
Ayala Gonen, PhD, RN, Dganit Sharon, PhD, RN, Lilac Lev-Ari, PhD, Ester Strauss, PhD, RN, and Ronen Segev, RN, MA
The Journal Citation Reports® (JCR), published by Thomson Reuters (formerly ISI), is a comprehensive and unique resource for journal evaluation, using citation data drawn from over 7,500 scholarly and technical journals worldwide. Coverage is both multidisciplinary and international, incorporating journals from over 3,300 publishers in 60 nations and approximately 227 disciplines. To be included among the journals in the JCR is indeed a great accomplishment, as only the top 10–12 percent of all scholarly journals submitted is accepted each year.

A journal’s impact factor is a measure of the frequency with which the “average article” in the journal has been cited in a particular year. The impact factor is calculated by dividing the number of current citations to articles published in the two previous years by the total number of articles published in the two previous years. Impact factors of a number of journals in the same discipline can be compared accordingly.

In 2013, the journal ranked 71 out of 106 in Nursing (Social Sciences) and 55 out of 106 in Nursing (Sciences), with an impact factor of 0.830.
